

Discounted Biodiesel Sale \$145/bbl **Off road use**

A company, REMFuel, is being formed to exclusively bring to market quality fuels from non-petroleum and depleted petroleum resources: D2, diesel/biodiesel, Jet fuel (Jet A through Jet 8), the alkanes of petroleum, and bunker fuel. For the initial production, 500,000 barrels of high-cetane biodiesel will be produced over an 18 to 24 month period using a process to meet or exceed current industry standards. The biofuel feedstock has already been secured for this project and is from a source that bears no impact on consumable food resources.

This is the result of over two and a half years of research and development by the manufacturer. The production facility will be located in Fort Worth, Texas. The principals bring to bear the specific skillsets to successfully implement this project: petro-chemistry, engineering, construction, management, and 3 generations of involvement in the oil distribution industry.

Sale price:
\$ 72.5 Million (\$ 145 / bbl)
(approx. \$3.45/gal)

Project duration: **< 2 years**
4-6 mo. Setup/Staging
Production/Delivery:
From month 6 to month 24

Product samples available now: 1 gallon - \$ 100.00 + Shipping

Please specify petroleum or non-petroleum based sample when ordering. Samples can be shipped directly to a testing and inspection service location of your choice. Two years have been devoted to the development of our process in order to provide an exceptional, refined, high cetane product. Our assay will be provided with samples.
